

## Details of the 2016 AMOS Sample

The survey was conducted in two waves sent to two different samples of municipal officials. Invitations to the first wave were sent in May and June of 2016 to a sample of 27,862 elected mayors and legislators (e.g., city councilors, aldermen, supervisors, etc.) from 4,187 cities. Subjects were recruited via emails with a link to the survey. We sent each potential subject three emails one to two weeks apart, inviting them to participate. The sample was compiled by a for-profit organization that gathers contact information and email addresses of public officials from municipalities that have a website and a population above 10,000 . The organization uses webcrawler software to identify when information changes on the contact pages of each city's website and then has research assistants update its contact list of officials accordingly. Unfortunately, this approach has a high error rate. Based on Qualtrics' email tracking, only 18,567 (or $67 \%$ ) of the email invitations were delivered to an active email address. In addition, we looked up a sample of 832 officials in the list and found that only $44 \%$ of the email addresses were accurate. 2,165 officials answered questions on the first wave of the survey, resulting in a response rate of $17.8 \%$ based on the number of accurate emails in the list. ${ }^{1}$ This rate is similar to

[^0]those from other surveys of municipal officials (e.g., Butler and Dynes (2016) report a response rate of 23\%).

The second wave of the survey was conducted in June and July of 2016. The sample consisted of the email addresses of elected mayors and city councilors (or equivalent) gathered by Butler and Dynes (2017) for the 2012 and 2014 American Municipal Officials Survey (see the supplementary appendix from Butler and Dynes (2016) for more details on the 2012 sample and Butler and Dynes (2017) for more details on both samples). Excluding the email addresses from the first wave resulted in a list of 29,250 emails. The email addresses from the 2012 survey were gathered in January through March of 2012 by a team of undergraduate research assistants who searched for the website of 26,566 US municipalities. The email addresses from the 2014 survey were gathered in a similar fashion in early 2014 but excluded municipalities with a population below 3,000 due to the low percentage of small towns with websites. Given that these email addresses were gathered 2 to 4 years prior to this latest survey, we knew that a large percentage of the emails and names of the officials (in the case of cities that use generic email accounts for each office) would no longer be accurate. Indeed, $26 \%$ of the emails sent through Qualtrics were undeliverable. It is likely that many more of the email addresses are no longer monitored though they remain active. With 1,500 officials participating, the response rate for the second round of the survey was $6.9 \%$.

The graphs and figures below provide additional descriptive statistics about the officials and municipalities in our sample as well as all municipalities across the U.S. The population of municipalities and demographic data on them are from the U.S. Census Bureau. We defined municipalities as general-purpose local governments using the following categorizations from the Census Bureau:

- Incorporated Places: In most states, they are called cities, towns, boroughs, and villages.
- Consolidated Cities: These are a "unit of government for which the functions of an Incorporated Place and its county or Minor Civil Divisions have merged."²
- Minor Civil Divisions (MCDs) in CT, ME, MA, MI, MN, NH, NJ, NY, PA, RI, VT, and WI. In these states, they are usually called townships or towns. We included Minor Civil Divisions from these states based on the Census Bureau's assessment that "Most of the MCDs in [these] twelve states ... serve as general-purpose local governments that can perform the same governmental functions as incorporated places."3

This resulted in a list of 24,083 municipalities. In the tables and figures, we use the term city instead of municipality to save space.

Tables A1 and A2 display the percent of respondents from each state as well as the percent of officials emailed from each state (i.e., respondents and non-respondents). The last column in both tables displays the percent of all municipalities from each state. As illustrated by these tables, respondents come from all states, save for Hawaii, and the percent from each state is similar to the percent of officials emailed from each state, though some states appear to have higher response rates than others. These results, combined with those in Tables A3 and A4, clearly show that our sample of municipal officials are quite diverse in terms of the states and types of municipalities they represent.

Table A3 provides descriptive statistics about the municipalities in and out of our sample. The data come from multiple sources, as indicated in the notes on Table A3. Column 1 displays information about all municipalities. It is important to note that the large majority of cities are small, rural, and overwhelmingly non-Latino white. The mean population is just 9,118 while the median population is 1,324 . To provide an additional comparison to the types of municipalities where most Americans live, Column 2 displays the same descriptive information except that the
sample of all municipalities is weighted based on each municipality's population as a proportion of the total population of all municipalities. With these weights, the mean city's population jumps to 583,120 and the median's is 62,298 . This is more reflective of where most Americans live. For instance, if all of the municipalities are ordered by population from smallest to largest, the median resident across all cities would be found in Maple Grove City, MN, a suburban city with a population of 61,567 , which is right at the median in the population weighted results in Column (2). The $25^{\text {th }}$ percentile resident is in a city of 17,000 while the $75^{\text {th }}$ percentile is in one of 260,000.

In column (3), we display data on municipalities that had at least one official who was invited to participate in the survey. In other words, these are the municipalities of officials in our sampling frame. Finally, in column (4), we have data on municipalities that had at least one respondent to the survey-i.e., our actual sample. Overall, the municipalities of officials whom we emailed or who responded are quite similar to each other and fall between the municipalities where most Americans reside (Column [2]) and the broader sample of all municipalities (Column [1]), with the municipalities with respondents (Column [4]) slightly more similar to those in Column (2) than the municipalities emailed (Column [3]).

Figures A1 through A3 display a density plot of the different municipal characteristics found in Table A3. What stands out is how similar municipalities with respondents are to all of the municipalities with officials included in the sampling frame. The one area where the distributions are most different are in population, in which respondents were more likely to be from slightly larger municipalities.

## Table A3: Characteristics of Municipalities by Sample Status

|  |  | (1) | (2) | (3) | (4) |

| \% Population Unemployed | Mean | 8.5\% | 9.1\% | 8.6\% | 8.5\% |
|  | Median | 7.5\% | 8.7\% | 7.8\% | 7.7\% |
| \% Population Homeowners | Mean | 16.2\% | 17.3\% | 17.3\% | 17.3\% |
|  | Median | 16.3\% | 17.3\% | 17.3\% | 17.3\% |
| \% Population with 2nd Mortgage | Mean | 0.8\% | 1.0\% | 1.1\% | 1.1\% |
|  | Median | 0.6\% | 0.9\% | 0.9\% | 0.9\% |
| Form of Government |  |  |  |  |  |
| \% Mayor/Council without City Manager |  | 65.7\% | 50.6\% | 53.9\% | 50.8\% |
| \% Mayor/Council with City Manager |  | 14.8\% | 40.0\% | 29.9\% | 36.4\% |
| \% Commissioners |  | 1.6\% | 1.3\% | 1.2\% | 1.5\% |
| \% Supervisors |  | 17.5\% | 8.0\% | 14.6\% | 11.2\% |
| \% Town Meeting |  | 0.2\% | 0.1\% | 0.2\% | 0.2\% |
| \% Representative Town Meeting |  | 0.2\% | 0.1\% | 0.2\% | 0.0\% |
| \% with some Town Meeting decision-making |  | 17.6\% | 8.6\% | 5.9\% | 11.2\% |
| \% with Home Rule Charter |  | 19.6\% | 47.5\% | 30.9\% | 36.3\% |
| \% with Republican Rep. in U.S. House |  | 47.5\% | 38.7\% | 51.1\% | 49.5\% |
| Citizens' Policy Preferences (only for cities w/ pop. at or above 25 k; range: -1 to 6 ; higher $=$ more conservative) | Mean | -0.08 | -0.18 | -0.07 | -0.08 |
|  | Median | -0.05 | -0.15 | -0.03 | -0.04 |

Notes: Column (1) includes all cities, towns, Population figures are from the 2010 U.S. Census. Form of government figures are from the U.S. Census Bureau's 2012 Census of Governments. The partisanship of the Representative of the U.S. House that represents each city is based on Congressional membership in March, 2016. Cities that crossed multiple House districts were matched to the district in which a plurality of the city's population resided. Citizens' Policy Preferences are from The American Ideology Project, which are estimated based on surveys conducted from 2000 to 2011. See Tausanovitch and Warshaw (2013) for more details on this measure.

| $\ldots \ldots-{ }^{-\cdots}$ All Cities | Cities Emailed |
| :--- | :--- |

Table A4 displays individual level data on the officials emailed (the sampling frame) and the actual respondents (the sample). In general, there very little data are available on municipal officials outside of the data we gather in the survey. However, based on the officials' titles, which we collect for all officials emailed, we can identify mayors in the sampling frame. The results in Table A4 indicate that mayors in municipalities without city managers, meaning these mayors were the chief executive in charge of their municipality's daily operations, were more likely to respond to our survey request than members of the main legislative body (e.g., city
council). On the other hand, mayors in cities with city managers, meaning these mayors were a member of the governing legislative body and not the chief executive of the municipality, responded at similar rates as the other legislators in their municipalities. Finally, we are also able to identify officials’ gender as it is indicated in the list we used from the for-profit organization that gathers elected officials’ contact information. For those gathered from municipal websites, we identified officials’ gender based on their first name. Female officials were more likely to respond, though this difference is substantively small.

## Table A4: Descriptive Statistics of Officials Emailed and Respondents

|  |  | Officials Emailed | Respondents |
| :---: | :--- | :---: | :---: |
| \% Mayors |  |  |  |
| In cities without City Managers | Mean | $13.4 \%$ | $18.0 \%$ |
| In cities with City Managers | 95\% C.I. | $(12.9 \%, 13.9 \%)$ | $(16.1 \%, 19.9 \%)$ |
|  | Mean | $11.2 \%$ | $12.7 \%$ |
| \% Female | 95\% C.I. | $(10.7 \%, 11.7 \%)$ | $(11.0 \%, 14.3 \%)$ |
|  | Mean | $28.3 \%$ | $31.5 \%$ |
|  | 95\% C.I. | $(27.8 \%, 28.7 \%)$ | $(29.9 \%, 33.0 \%)$ |

Finally, to illustrate that our sample of officials are diverse in terms of other politically important variables, we provide some descriptive statistics on the sample in tables A5 and A6 and figures A4 - A5. These data are from responses in the survey and show that our sample of officials vary significantly in terms of their partisan identity, self-placed ideology, term limits, partisan status of elections, electoral vulnerability, tenure, views on representation, static ambition, and progressive ambition.

Figure A4: Histogram of Years Served in Current Seat

Notes: Histogram shows response to question: "How many years have you served in your current office?" Response options ranged from 1 to 29 in one year increments and "30 or more."

Figure A5: Histogram of Years Planning to Serve in Current Office

Notes: Histogram shows response to question: "How many years do you hope to serve in your current office?" Response options ranged from 1 to 19 in one year increments and " 20 or more."

Table A5: Characteristics of Respondents based on Survey Questions and Responses

Q: What party do you identify with?

|  | $\%$ |
| :--- | ---: |
| Republican | 35.3 |
| Democrat | 34.0 |
| Independent or Unaffiliated | 27.0 |
| Other | 3.7 |
| TOTAL | 100 |

Q: Generally speaking, would you describe your political views as:

|  | \% |
| :--- | ---: |
| Very Liberal | 3.6 |
| Liberal | 12.8 |
| Somewhat Liberal | 14.3 |
| Middle of the Road | 24.6 |
| Somewhat Conservative | 21.7 |
| Conservative | 20.0 |
| Very Conservative | 3.1 |
| TOTAL | 100 |

Q: Which of the following best describes how individuals are elected to your position?

|  | $\%$ |
| :--- | ---: |
| The elections are NON- <br> PARTISAN (i.e., candidates' <br> party DOES NOT appear on <br> the ballot) | 73.0 |
| The elections are PARTISAN <br> (i.e., candidates' party appear <br> on the ballot) | 27.0 |

| TOTAL | 100 |
| :--- | :--- |

Q: Are there term limits for your current office?

|  | $\%$ |
| :--- | ---: |
| Yes | 19.3 |
| No | 80.7 |
| TOTAL | 100 |

Q: By how many percentage points did you win your last election for this office?

|  | $\%$ |
| :--- | ---: |
| below 1\% point | 2.3 |
| 1 to almost 5\% points | 7.7 |
| 5 to 15\% points | 18.8 |
| More than 15\% points | 34.8 |
| I ran uncontested | 32.3 |
| I lost or did not run again | 4.1 |

Q: When it comes to important issues, elected officials should...

| (1) Do what their constituents | 4.0 |
| :--- | ---: |
| want, even if it conflicts with |  |
| what the elected official |  |
| thinks is right. |  |
| (2) |  |

(3)
24.1
(4)
40.5
(5) Do what they think is 20.0 right, even if it conflicts with what their constituents want.

TOTAL
100

Table A6: Respondents' Progressive Ambition

|  |  | Progressive Ambition |  | Level Might Run (\%) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Freq. | \% | Picked at least 1 | Local | State | Natio nal |
| Highest <br> Ambition | 1) "It is something I definitely | 466 | 12.7 | 96.6 | 58.8 | 54.3 | 21.9 |
|  | would like to undertake in the future." |  |  |  |  |  |  |
|  | 2) "It is something I might undertake if the opportunity presented itself." | 927 | 25.2 | 97.4 | 53.2 | 62.5 | 18.6 |
|  | 3) "I would not rule it out forever, but I currently have no interest." | 1,580 | 43.0 | 93.4 | 59.8 | 41.9 | 7.7 |
| Lowest Ambition | 4) "It is something I would absolutely never do." | 704 | 19.2 | 36.1 | 32.4 | 3.7 | 0.7 |
|  | TOTAL | 3,677 | 100 | 83.9 | 52.9 | 41.3 | 10.9 |

Notes: The general Progressive Ambition question asked, "Which best characterizes your attitudes toward running for a higher office in the future?" The possible responses are shown in the rows numbered 1 through 4 on left side. The Level Might Run question asked, "Check the level of government of any offices (besides your current one) that you might ever be interested in running for." The possible response options were "Local Level(e.g., city, county, school board)"; "State Level(e.g., Legislature, Governor)"; and "National Level(e.g., Congress, President)." The percent choosing each level of government tabulated by their level of progressive ambition is indicated in the columns on the right side.
